DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following invention is required under 35 U.S.C. 121:

Group I, claims 1-2 drawn to a method for calculating an HMM output probability, which is classified under class 704, subclass 256.

Group II, claims 3-4 drawn to a speech recognition apparatus, which is classified under class 704, subclass 231.

Inventions of groups II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention of group II does not require the specific steps and equations of the method for calculating an HMM probability. The subcombination group I has separate utility such as voice-controlled systems.

During a telephone conversation with the applicant's attorney on 7/9/2004, an election was made with traverse to prosecute the invention of group I, claims 1-2. Affirmation of this election must be made by applicant in replying to this Office action. Claims 3-4 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-2 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The method of calculating an HMM output probability using the claimed mathematical expressions merely manipulates only numbers without some claimed practical application. The process merely performs mathematical operations, i.e., a mathematical algorithm. Note the method steps consist of using a noncorrelative normal distribution (expression 1), using the logarithms (expression 2), reducing the number of calculations, creating codebooks, substituting the values, finding the calculation term, creating said tables, obtaining the total output values, and calculating the output probability. There is no claimed reference to any practical application, e.g., speech recognition, with specified relationship to the claimed mathematical algorithm. As such, the claimed invention does not fall into one of the four statutory classes of invention under 35 U.S.C. 101.
